

Sales Sheet

Mobile Extension

for SV9100 & SL1100

System phone features on the move

Mobile Extension lets you carry your office number with you. With system phone functionality straight to your mobile, you can treat it like your desk phone. It really is like being in when you're out.

Empower your mobile workforce

You can stay just as responsive when you're on the move, maintaining maximised productivity and high service standards. As well as being reachable on a single direct number, you can stay active within departmental call groups and continue to take relevant calls.

Using the Call-back feature, you can make calls from your mobile via the phone system. As well as potentially cheaper calls, this also means you can avoid divulging your personal mobile number when making calls out of the office.

You'll have access to features such as call transfer, call logging, voicemail and caller ID, making it easy to stay seamlessly connected to colleagues and clients.

At a glance

- Stay contactable on your desk phone number, wherever you are
- Maintain high service levels whilst on the move
- Never miss an important call even when out of the office
- Ideal for mobile sales teams and homeworkers
- Call recording capabilities
- Cost saving potential

Never miss a thing, at home or on the road

By missing fewer calls when on the road, your team can appear more professional and the experience of your customers will be improved.

Keeping a key sales person reachable on a single number from anywhere means that crucial calls are answered and orders won't be lost to competitors.

Mobile Extension

Call recording on your mobile

Did you know that the call recording that you use on your system phone will also work if you're using a Mobile Extension? Many of today's business calls and verbal agreements are made over a mobile phone.

Having a record of who said what could prevent costly litigation and prevent a dispute from developing. With Mobile Extension you'll have peace of mind wherever you are, with calls safely archived and easily accessible if ever you need them.

Got MyCalls Call Manager?

Using MyCalls with Mobile Extension you'll be able to view detailed information for calls made out of the office.

This is ideal for monitoring how many calls your field-based team are handling, and how much outgoing calls are costing the company.

- Class of service
- Conference call
- Department group member
- DID
- Hold & transfer
- Hotel features
- Incoming ring group member
- Paging
- Speed dial
- Toll restriction

Cost saving potential

NEC's Mobile Extension is a versatile feature which has a variety of potential cost savings.

For example, it can work with an employee's personal mobile phone, saving a company the expense of company mobiles. The user simply dials any number via the main office, the call is then charged to the company, not the personal mobile. No more fiddly expenses to work out either!

Also, even a landline can be designated as a Mobile Extension, ideal for homeworkers, saving the further expense of another IP Handset.
